

## **VLT® FlexConcept wins award**

04 October 2011

The Danfoss VLT® FlexConcept has been announced as one of the winners of the “Enological, viticulture Innovation Prize” at the 2011 SIMEI exhibition. SIMEI is the largest specialized exhibition in the world for machinery and equipment for wine making, beverage production, bottling and packaging.

A jury of industry and technical specialists, as well as representatives from some of the most important Italian vineyards, has chosen the award winners among the best product and process innovations on display at the event.

The VLT® FlexConcept uses the Red Dot Design award winning VLT® OneGearDrive, combined with either a VLT® AutomationDrive FC302 for central control or a FCD302 drive for decentral control.
